# Contact tracing of active COVID-19 cases

# Tracing contacts

## Who is a contact of an active COVID-19 case?

Those who were in direct contact with the active COVID-19 case for up to 15 minutes, at a distance of less than two meters, and without wearing a mask.

Anyone who had been in a closed environment with the active COVID-19 case without proper ventilation. (Note that a person is considered a contact in this case if they were in direct contact with the active COVID-19 case for up to 15 minutes, even if they were wearing a mask).

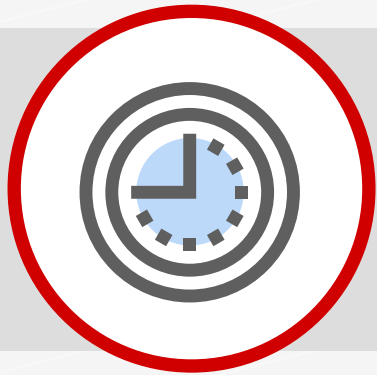

Anyone who shares housing and facilities with the active COVID-19 case.

Whoever was in direct physical contact with the active COVID-19 case, such as through shaking hands, or having touched anything in the same place.

# The specified time period for tracing contacts

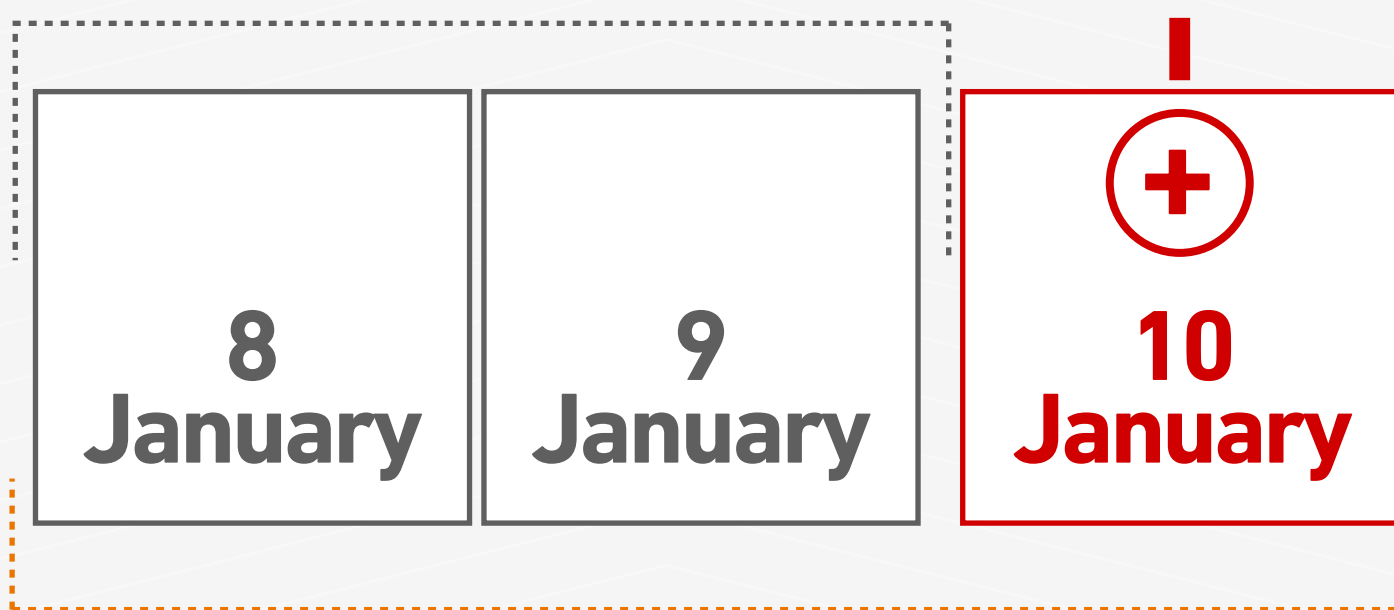

If the active COVID-19 case tested positive **but does not show any symptoms:**

Those in contact with the active COVID-19 case from the day of the positive test result and two days prior

## Example

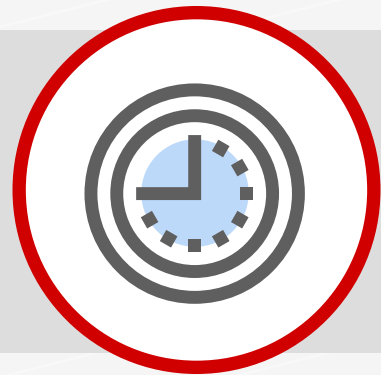

2 days before  
the positive  
result

**Positive result  
obtained**

**Contacts**

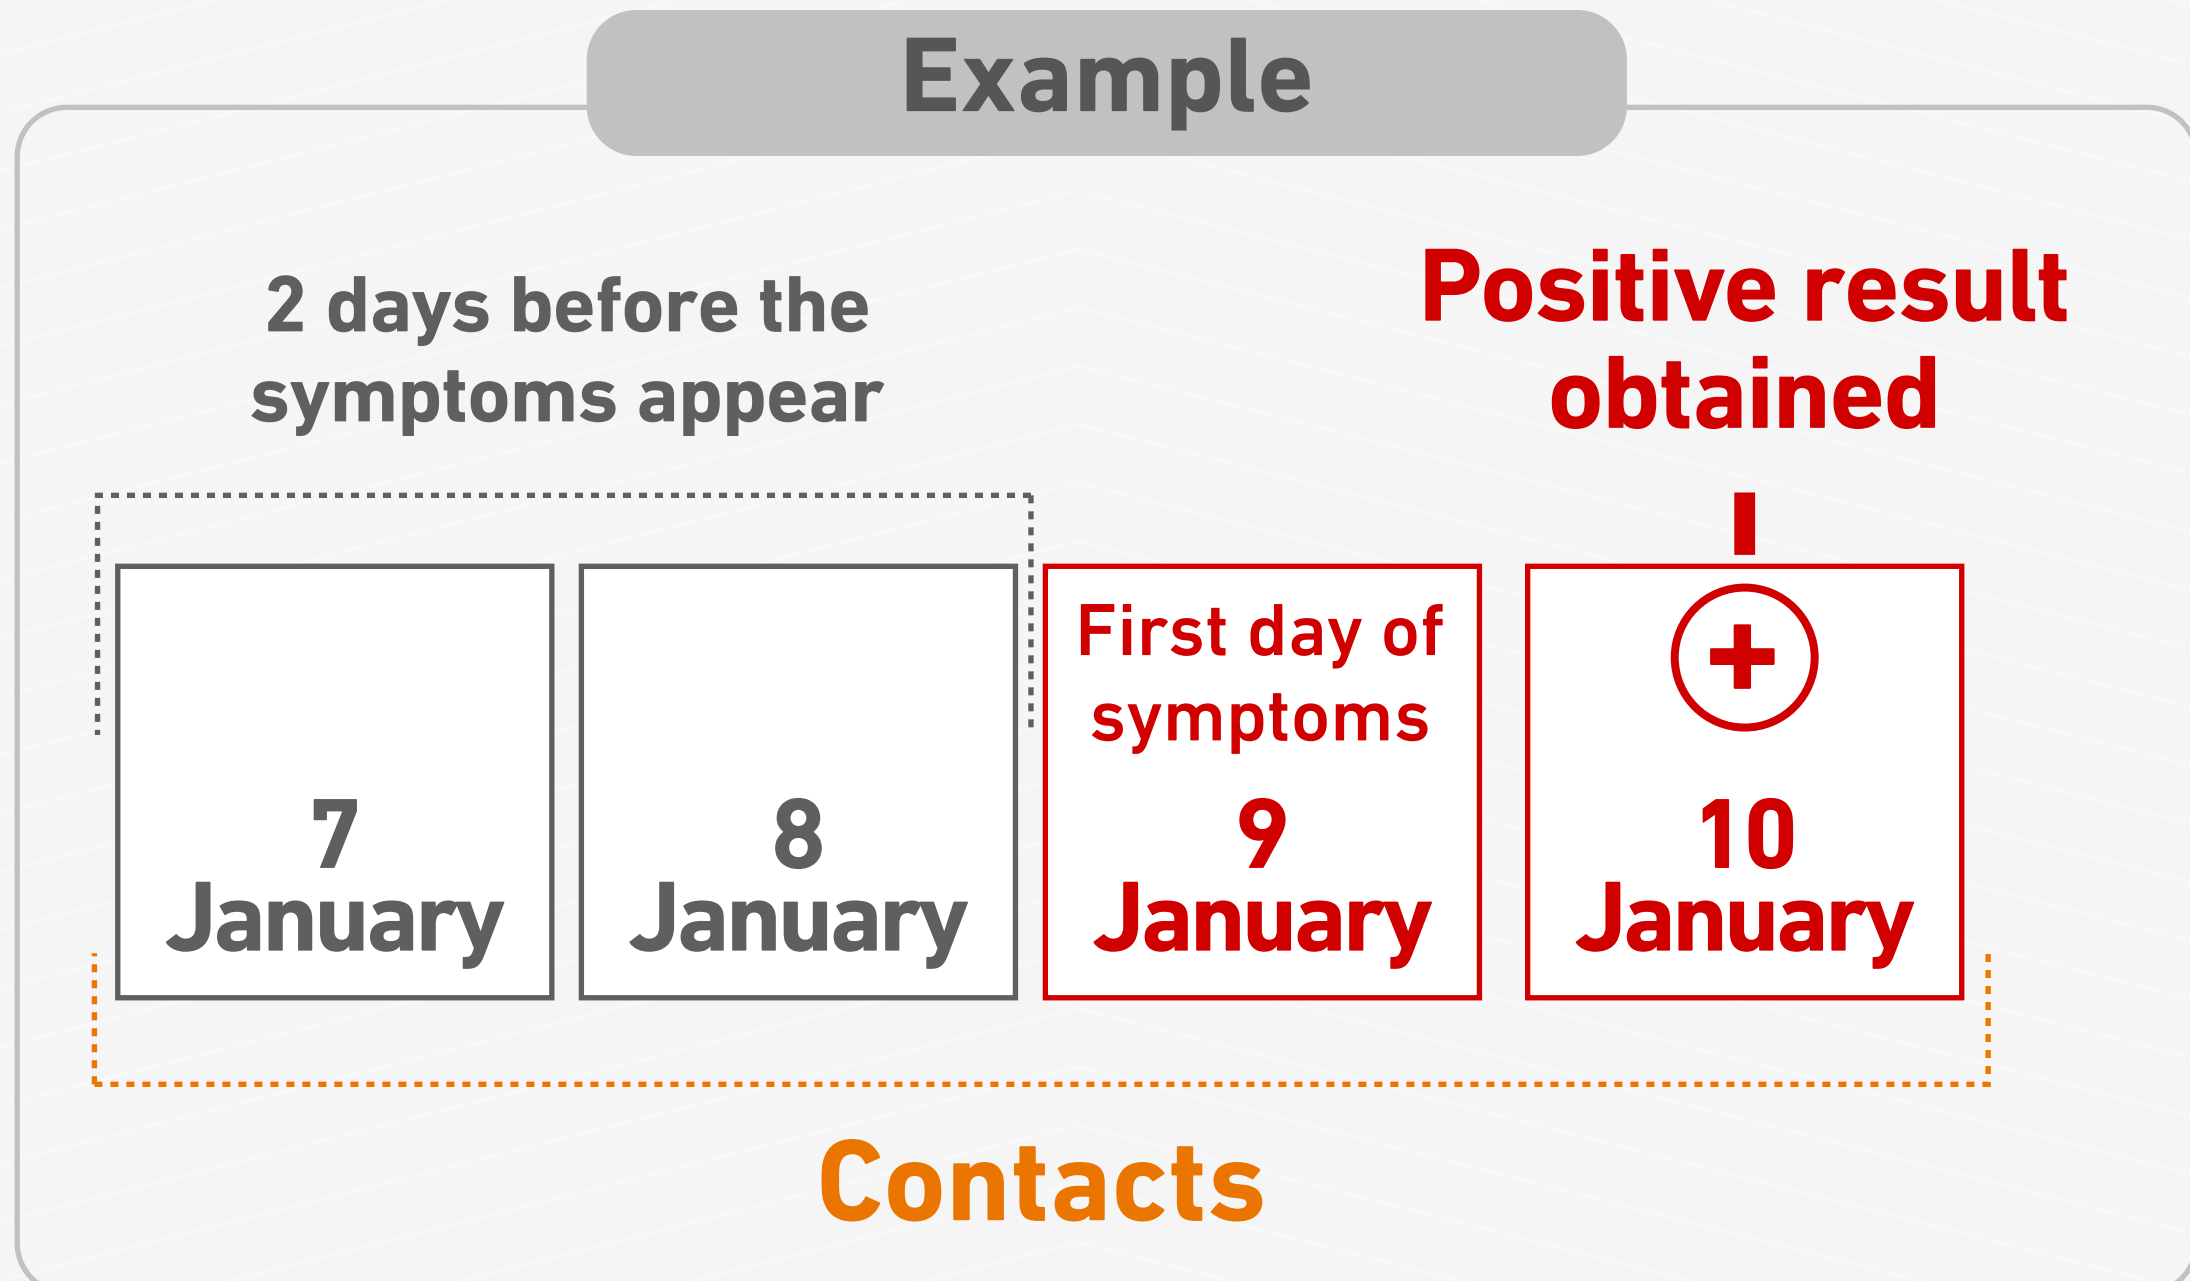

# The specified time period for tracing contacts

If the active COVID-19 case tested positive and **showing symptoms of the virus:**

Those in contact with the active COVID-19 case from the day of the positive test result and two days prior to the appearance of symptoms

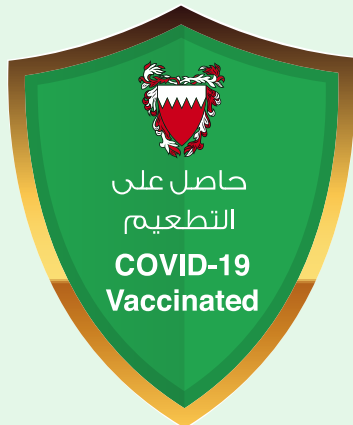

## Example

**Early testing, as soon as symptoms appear, contributes to the quick isolation of active COVID-19 cases and reduces the number of contacts, which leads to an effective and quick treatment and recovery**

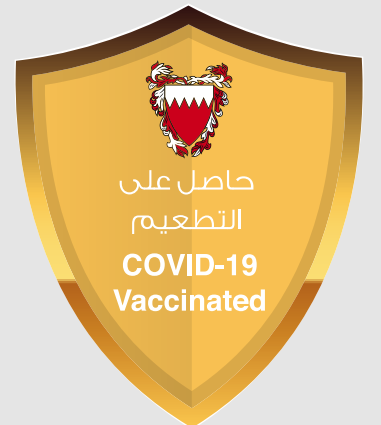

## The precautionary quarantine for contacts of active COVID-19 cases

### Contacts holding a green shield

**Are not subject  
to a precautionary  
quarantine**

### Contacts who do not hold a green shield

**Are required  
to quarantine  
for seven days**

Anyone who experiences any COVID-19 symptoms (such as a high temperature, coughing, and shortness of breath) should get tested
